

Rihan Husen Shaikh

Final-Year B.Tech. Student – Artificial Intelligence & Data Science

☎ +91 8530017493 ✉ shaikhrihan323@gmail.com
🌐 LinkedIn 🐙 GitHub

Professional Summary

Final-year AI & Data Science undergraduate with hands-on experience in Machine Learning, Data Science, and MLOps. Skilled in building end-to-end predictive systems, NLP applications, REST APIs, and deployment pipelines using Python, Scikit-Learn, FastAPI, Docker, and GitHub Actions. Seeking Data Scientist and Machine Learning roles.

Education

Dr. J. J. Magdum College of Engineering, Jaysingpur
Bachelor of Technology (Artificial Intelligence & Data Science)
Aug 2023 – May 2027 (Expected)

CGPA: **8.3/10**

Technical Skills

Languages: Python, SQL

ML/Data: Scikit-Learn, Pandas, NumPy, NLP, EDA, Feature Engineering, Deep Learning, Matplotlib

Frameworks: FastAPI, Flask

MLOps: Docker, GitHub Actions, DVC, MLflow

Cloud: AWS EC2, ECR, S3

Database: MongoDB, MySQL, SQLite

Tools: Git, GitHub, Jupyter, Power BI

Experience

Artificial Intelligence & Machine Learning Intern
TECHSPOT INFOTECH LLP

Jan 2026

- Completed project-based training in Python and Machine Learning through real-world assignments.
- Applied data preprocessing, feature engineering, model development, and evaluation techniques on AI/ML projects.

Selected Projects

End-to-End MLOps Pipeline for Vehicle Insurance Prediction

🐙 Repository

Tech: Python — FastAPI — Scikit-Learn — Docker — GitHub Actions

- Designed and deployed an end-to-end MLOps pipeline for vehicle insurance cross-sell prediction using FastAPI, Docker, and Scikit-Learn.
- Improved minority-class prediction using SMOTEENN within Stratified K-Fold Cross Validation and optimized decision thresholds using Precision-Recall Curve analysis.
- Automated model validation and CI/CD deployment using GitHub Actions with production model comparison against artifacts stored on AWS S3.

Ocean Pearl – Restaurant Intelligence System

🐙 Repository

Tech: Python — Flask — NLP — Plotly

- Developed an AI-powered restaurant analytics platform featuring sentiment analysis, sales forecasting, and personalized food recommendations.
- Built interactive dashboards for customer insights, menu engineering, KPI monitoring, and business analytics using Flask and Plotly.
- Applied NLP techniques to analyze customer feedback and support data-driven decision making.

Smart Crop Recommendation System

🐙 Repository

Tech: Python — Django — Random Forest

- Developed a machine learning web application that recommends suitable crops using soil nutrients and weather parameters.
- Trained a Random Forest classifier achieving over 93% prediction accuracy and improved inference speed through model caching.
